SpeedCloud Capability Catalog

Superior performance
at lower cost

SpeedCloud[®]

Red Hat

OpenShift &
OpenStack

Compute Services

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Run -Compute Engine

COMPUTE SERVICES

General Purpose Instances

General Purpose Instances are virtual machines offering balanced compute, memory, and storage for general workloads.

Amazon EC2

Google Cloud Platform

Google Compute Engine

Azure Virtual Machines

IaaS (Infrastructure as a Service)

COMPUTE SERVICES

Baremetal Servers

Bare Metal Servers are single-tenant, physical servers providing direct access to hardware resources without virtualization.

SpeedCloud[®]

SpeedCloud Run - Compute Engine

Amazon EC2

Google Cloud Platform

Google Cloud Bare Metal Solution

Azure Dedicated Host

Networking

IaaS (Infrastructure as a Service)

NETWORKING

Virtual Networking in the Cloud

Virtual Networking in the Cloud refers to a virtualized network infrastructure that enables secure, scalable, and on-demand connectivity between cloud resources.

SpeedCloud[®]

SpeedCloud Connect -Virtual Networks
Self-service virtual networks on the cloud

Amazon Virtual Private Cloud (VPC)

Google Cloud Platform

Google Virtual Private Cloud (VPC)

Azure Virtual Network (VNet)

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Connect -PrivateLink

Dedicated networks connections like P2P, MPLS,
Direct Peering/Dedicated interconnect.

NETWORKING

Private Links to the Cloud

Private Links to the Cloud are dedicated,
secure, and private connections that
enable direct access to cloud resources
without traversing the public internet.

AWS PrivateLink

Google Cloud Platform

Private Service Connect

Azure Private Link

IaaS (Infrastructure as a Service)

NETWORKING

Remote Access VPN to the Virtual Network

Remote Access VPN is a secure, encrypted connection that allows remote users to access a virtual network as if they were directly connected to it.

SpeedCloud[®]

SpeedCloud Protect -VPN MFA

Access your virtual workloads without exposing to the Internet

AWS Client VPN

Google Cloud Platform

Google Cloud VPN

Azure Point-to-Site VPN / Azure VPN Gateway

IaaS (Infrastructure as a Service)

NETWORKING

Site to Site VPN to the Virtual Network

Site-to-Site VPN is a secure, encrypted connection between two networks, extending a virtual network to remote sites or branches over the internet.

SpeedCloud[®]

SpeedCloud Connect -Site-to-Site VPN

Securely establish connectivity to the Virtual Networks in Cloud from your premises

AWS Site-to-Site VPN

Google Cloud Platform

Google Cloud VPN (Site-to-Site)

Azure VPN Gateway

IaaS (Infrastructure as a Service)

NETWORKING

Content Delivery Network (CDN)

Content Delivery Network (CDN) is a system of servers that delivers website content faster by sending it from the server closest to the user.

SpeedCloud[®]

SpeedCloud Connect -CDN

Amazon CloudFront

Google Cloud Platform

Google Cloud CDN

Azure Content Delivery Network (CDN)

IaaS (Infrastructure as a Service)

NETWORKING

Load Balancing

Load Balancing refers to the distribution of incoming network traffic across multiple servers to improve responsiveness, reliability, and scalability of applications.

SpeedCloud[®]

SpeedCloud Connect -Load Balancer

Distribute incoming load across various targets

Elastic Load Balancer (ELB); Network Load Balancer (NLB)

Google Cloud Platform

Google Cloud Load Balancing

Azure Load Balancer

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Run -Managed Autoscale

NETWORKING

AWS Auto Scaling

Google Cloud Platform

Google Cloud Autoscaling

Azure Autoscale

Autoscaling

Autoscaling monitors your applications and automatically adjusts capacity to maintain steady, predictable performance at the lowest possible cost.

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Connect -Communication Gateway

NETWORKING

SIP Trunk

SIP Trunk is a virtual connection that enables direct communication between a private branch exchange (PBX) and the public switched telephone network (PSTN) over the internet using Session Initiation Protocol (SIP).

Managed by AWS

Google Cloud Platform

Managed by Google

Azure Communications Gateway

Cloud-native Services

PaaS (Platform as a Service)

SpeedCloud Run -Managed Kubernetes
Deploy and run Kubernetes clusters

CLOUD-NATIVE SERVICES

Kubernetes Service

Kubernetes Service is an abstraction that provides a network identity and load balancing for accessing a group of pods in a Kubernetes cluster.

Amazon Elastic Kubernetes Service

Google Cloud Platform

Google Kubernetes Engine (GKE)

Azure Kubernetes Service (AKS)

Database Management

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Run - Managed Database

MySQL, PostgreSQL, MSSQL, Oracle

DATABASE MANAGEMENT

Relational DBMS

Relational Database Management System (RDBMS) is a database management system that stores and manages data in structured, related tables with defined relationships supporting complex queries using SQL.

Amazon Relational Database Service (RDS)

Google Cloud Platform

Google Cloud SQL

Azure Database Services

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Run -Managed Database

MongoDB

DATABASE MANAGEMENT

Non-Relational DBMS

Non-Relational Database Management System (NoSQL DBMS) is a database management system that stores and manages data in flexible, schema-less formats such as key-value, document, or graph structures.

Amazon DynamoDB

Google Cloud Platform

Google Cloud Firestore

Azure Cosmos DB

Storage Services

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Run -NVMe Storage

STORAGE SERVICES

Block Storage

Block Storage is a type of storage that provides raw, unformatted disk space to applications, allowing them to manage data at the block level.

Amazon Elastic Block Store (EBS)

Google Cloud Platform

Google Persistent Disk

Azure Managed Disks

PaaS (Platform as a Service)

SpeedCloud[®]

SpeedCloud Run -Object Storage S3

STORAGE SERVICES

Object Storage

Object Storage is a type of storage that manages and stores data as individual objects, each with its own metadata, in a flat, scalable, and highly durable repository.

Amazon S3 (Simple Storage Service)

Google Cloud Platform

Google Cloud Storage

Azure Blob Storage

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Run -PrUS

STORAGE SERVICES

Private Unified Storage

Providing highly available and secure unified private storage on-premise supporting block, file and object storage.

Third party integrations on AWS

Google Cloud Platform

Third party integrations on GCP

Third party integrations on Azure

Business Continuity

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Run -Managed Backup

Managed backup services for any workloads

BUSINESS CONTINUITY

Backup Service

Backup Service is a solution that automatically copies and stores data to prevent loss, enabling recovery of files, applications, and systems in case of failure or disaster.

AWS Backup

Google Cloud Platform

Google Cloud Backup and Restore

Azure Backup

IaaS (Infrastructure as a Service)

BUSINESS CONTINUITY

Disaster Recovery

Disaster Recovery is a process that enables rapid restoration of IT systems, applications, and data after a disaster or outage, minimizing downtime and ensuring business continuity.

SpeedCloud[®]

SpeedCloud Run -Managed Disaster Recovery

AWS Elastic Disaster Recovery

Google Cloud Platform

Google Cloud Disaster Recovery

Azure Site Recovery (ASR)

Migration & Transfer Services

IaaS (Infrastructure as a Service)

MIGRATION & TRANSFER SERVICES

Virtual Machine & Workload Migration

Virtual Machine (VM) and Workload Migration is the process of transferring VMs, applications, and workloads from one environment to another, such as on-premises to cloud or between clouds, with minimal downtime and disruption.

SpeedCloud[®]

SpeedCloud Build -Managed Migration

Migrate workloads from any cloud

AWS Migration Hub

Google Cloud Platform

Google Cloud VM Migration

Azure Migrate

Azure Migrate

Security Services

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Protect -Firewall 1G

Security groups for the instances and across the virtual network

SECURITY SERVICES

Network Firewall

Network Firewall is a security system that controls and monitors incoming and outgoing network traffic based on predetermined rules, blocking unauthorized access and protecting against threats.

AWS Network Firewall

Google Cloud Platform

Google Cloud Network Firewall

Azure Firewall

IaaS (Infrastructure as a Service)

SpeedCloud[®]

SpeedCloud Protect -NGFW

SECURITY SERVICES

IDS/IPS

Monitor network traffic and devices for malicious activity or policy violations to detect threats, report them and take automated actions to prevent the detected threats in real-time.

Amazon GuardDuty/ AWS Network Firewall

Google Cloud Platform

Google Cloud IDS / third-party integrations on GCP

Azure Firewall / Azure Firewall Premium IDPS

PaaS (Platform as a Service)

SpeedCloud[®]

SpeedCloud Protect -WAF

Imperva WAF

SECURITY SERVICES

Web Application Firewall

Web Application Firewall (WAF) is a security solution that protects web applications from attacks, vulnerabilities, and exploits by filtering and monitoring incoming traffic based on predefined rules and policies.

AWS WAF (Web Application Firewall)

Google Cloud Platform

Google Cloud Armor

Azure Web Application Firewall (WAF)

PaaS (Platform as a Service)

SpeedCloud[®]

SpeedCloud Connect -DDoS-Protected Data Transfer/
SpeedCloud Connect -DDoS-Protected Internet Port

SECURITY SERVICES

DDoS Protection

DDoS Protection detects and mitigates Distributed Denial-of-Service attacks to prevent network overload.

AWS Shield

Google Cloud Platform

Google Cloud Armor

Azure DDoS Protection

PaaS (Platform as a Service)

SpeedCloud[®]

SpeedCloud Protect -XDR

SECURITY SERVICES

Endpoint Security

Endpoint Security refers to the protection of endpoint devices such as laptops, desktops, and mobile devices from cyber threats, malware, and unauthorized access.

Amazon Inspector

Google Cloud Platform

Managed by Google

Microsoft Defender for Endpoint

PaaS (Platform as a Service)

SpeedCloud[®]

SpeedCloud Protect -KMS-HSM Partition

SECURITY SERVICES

Key Management Services

Key Management Service (KMS) is a secure solution that creates, manages, and controls encryption keys to protect data at rest and in transit.

AWS Key Management Service (KMS)

Google Cloud Platform

Google Cloud Key Management Service (KMS)

Azure Key Vault

Identity Management

SaaS (Software as a Service)

IDENTITY MANAGEMENT

Identity and Access Management

Identity and Access Management (IAM) is a system that securely manages user identities, authenticates access, and authorizes permissions to protect resources and data.

SpeedCloud[®]

SpeedCloud Protect -Identity

AWS Identity and Access Management (IAM)

Google Cloud Platform

Google Cloud Identity and Access Management (IAM)

Azure Identity
